

## Desktop Version of Pro-Estimator QuickBooks Importer by Web-Est

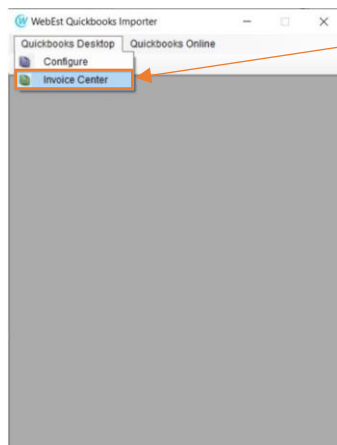

To access the link for the QuickBooks Importer, you will go to the left sidebar of your Pro-Estimator account and select “Reports”. Once on the Reports page, select the “QuickBooks Export” button. On the Export page you will see a link to download the Importer. After you have installed the Importer, you will have a desktop icon to allow you to open it.

After you have installed the QuickBooks Importer application, you will need to open QuickBooks. When using the QB’s desktop version, you will need to create a *new* tax item at a 0% tax rate (in addition to your State Sales Tax item – **This should be named a 2 letter abbreviation for your state**). You have the option to choose it as the most common sales tax item, and it will automatically be selected by default on all new invoices. If the \$0.00 tax item is not selected as “Your most common sales tax item”, you can manually select that on the QB’s invoice after it is imported from Pro-Estimator.

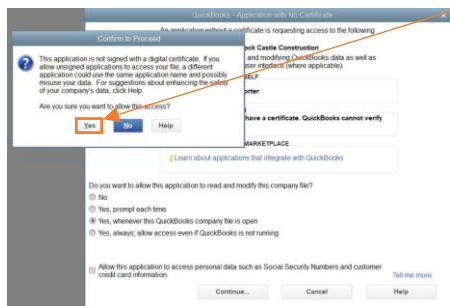

**QB’s Desktop version instructions:** After you have opened the Importer, select the QuickBooks Desktop link at the top of the Importer. In the dropdown, select “Invoice Center”.

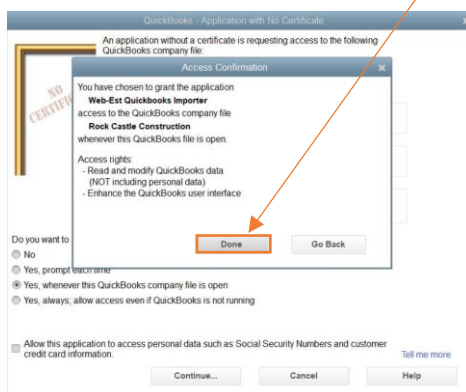

Once you have selected “Invoice Center”, you may be prompted to authorize the Importer App to allow access to you QuickBooks software. Select “Yes, whenever this QuickBooks company file is open”.

You will see a confirmation popup. Select “Yes”.

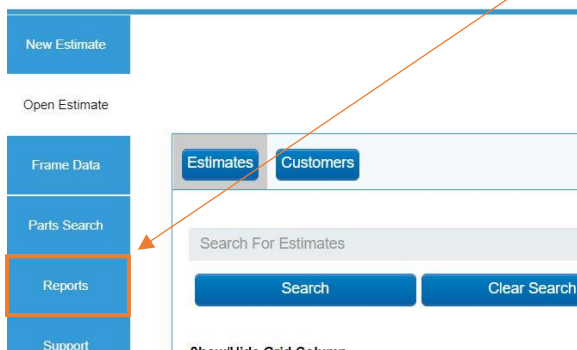

On the following popup, select “Done”.

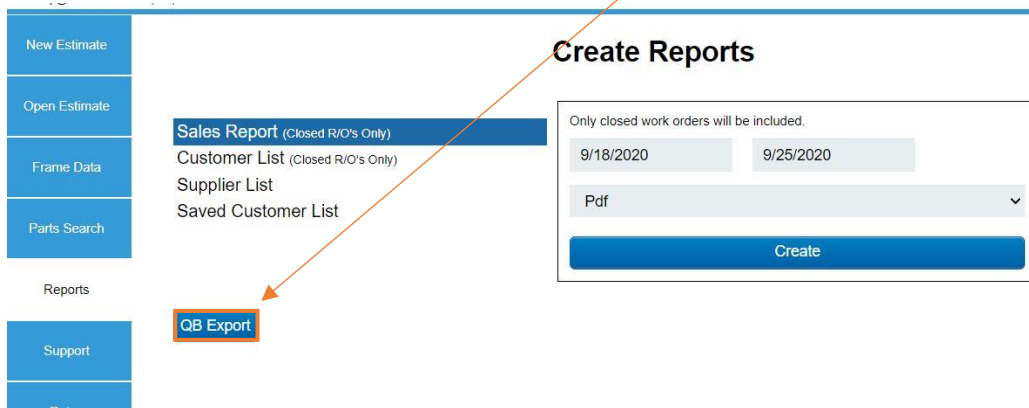

After the above steps are completed, you will see a popup for the actual QB's file import screen.

In this example, you will then generate the QB's export file from your Pro-Estimator account (you can generate the QB's export file before opening QB's and/or the importer). Log into your Pro-Estimator account. On the left sidebar, select the "Reports" link.

After the Reports page opens, select the blue "QB Export" button.

This will open the QB's export page. Here you will set your date range for the reports you want to export. **\*\*Only closed Repair Orders will be included, and are based on the date they were closed.** Select the correct date range by clicking in the **"Date Fields"**. Once you have the correct date range, select the **"Refresh Data"** button to produce the desired list of files for export.

The screenshot shows the 'QB Export' interface. At the top, there's a date range selector set to '9/18/2020' to '9/25/2020' with a 'Refresh Data' button. Below this is a table of repair orders. The table has columns: Estimate ID, Exported On, Export Rows, Customer Name, VIN, Insurance Company, Closed RO Date, and Ins Claim Details. Three rows are visible, each with a blue checkmark in the 'Exported On' column. Below the table is an 'Export Data' button. At the bottom, there's an 'Export History' section showing a single export record with a 'Download' button.

Estimate ID	Exported On	Export Rows	Customer Name	VIN	Insurance Company	Closed RO Date	Ins Claim Details
7449346	09/25/2020	4	Zeke Smith	1ARCT123AB123456	ABC Insurance Tester	09/25/2020	456456-2, Billybob Thornton, (564) 895-9513
7713854	09/25/2020	4	Willie McGee	5P6598W5656565654	Example Insurance Company	09/25/2020	987456-A-1, Sarah Smith, (111) 111-1111
10082887	09/25/2020	4	Ben Gleason			09/25/2020	

**\*\*\*Note:** If you need to adjust, then reimport, the same file after it has already been imported, you will need to re-open the repair order, make the changes and close the repair order again. Make sure to choose the **"Selection Box"** field to place a blue check mark in the blank field. Once imported, the field for that particular file will not be auto-selected. The importer will auto correct the invoice in QuickBooks to match the current totals when re-imported.

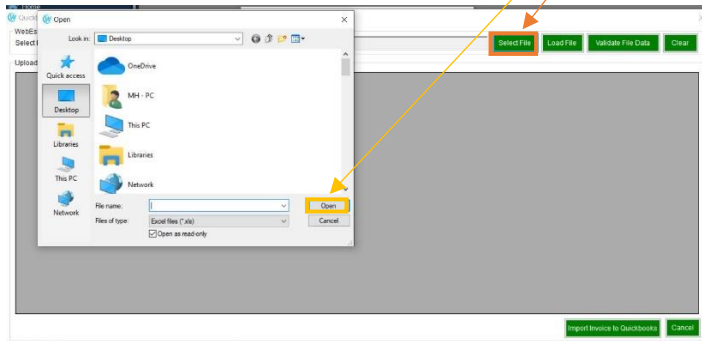

After you have the correct date range & files selected, select the **"Export Data"** button.

This screenshot is identical to the one above, but with a red arrow pointing to the 'Export Data' button in the left sidebar, indicating the next step in the process.

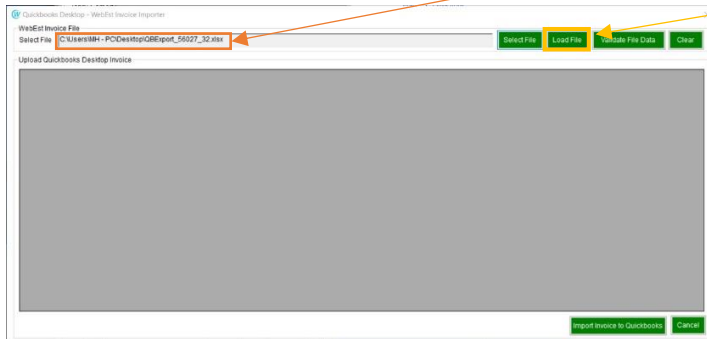

You will then see a popup allowing you to choose where to save the file on your computer. You will need to create a dedicated **folder** for your QuickBooks files, so they can be saved and imported to QB's. Name the file something you can easily recognize. Placing the folder on the computer **"Desktop"** will make it easy to locate. Once the folder is located, select the **"Save"** button.

The screenshot shows a Windows 'Save As' dialog box. The file name is 'QBExport\_1.xlsx' and the save type is 'Excel Workbook (\*.xlsx)'. The location is set to 'Desktop'. In the file list, a new folder named 'QuickBooks Import Files' is highlighted. The 'Save' button is at the bottom right.

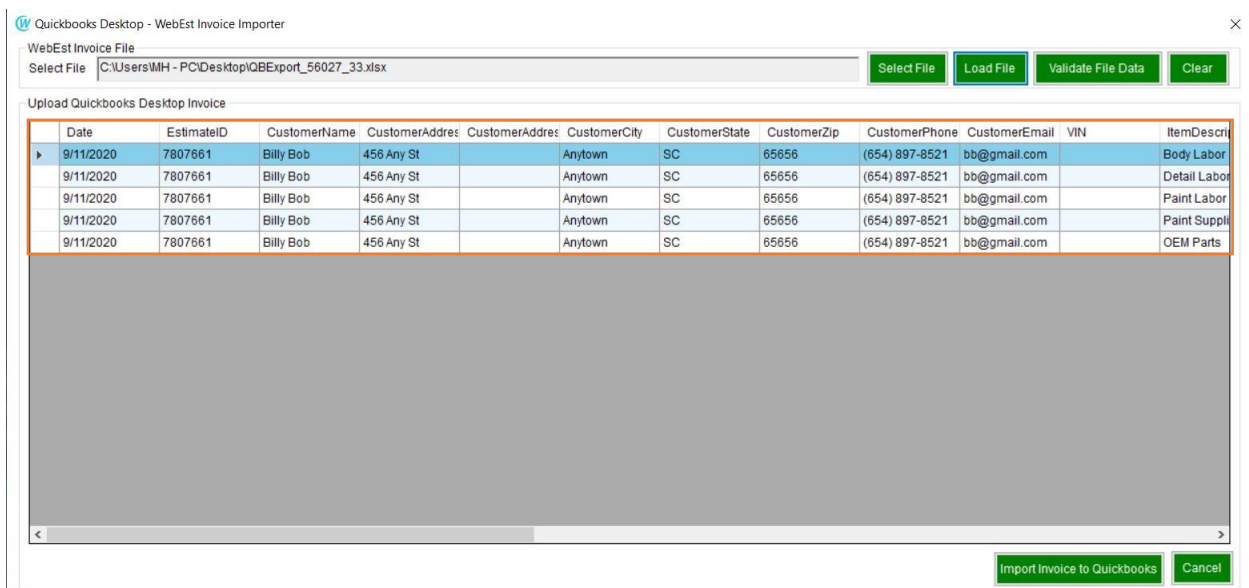

Next, in the QuickBooks Importer, choose the **“Select File”** button. You will get a navigation popup to allow you to choose the correct file from your QB’s Import folder that you previously created. Once you have chosen the correct file, select the **“Open”** button.

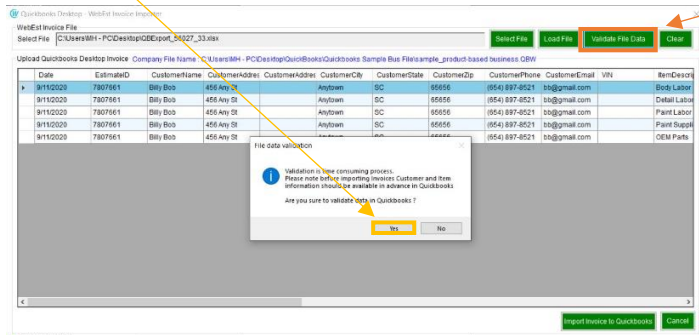

Notice that your file is now listed in the **“Select File”** field. Next, select the **“Load File”** button.

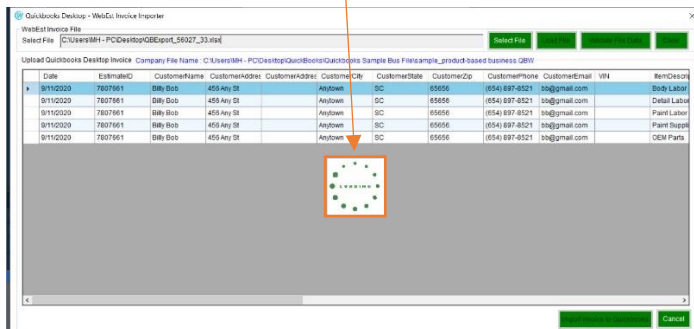

Your file will be loaded into the QuickBooks Importer.

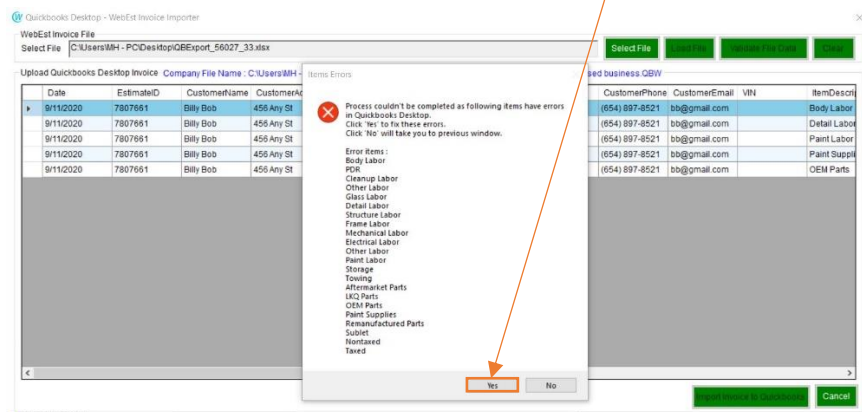

Next, you will Validate the file to ensure it will import properly into QB's. The validation process will create both Customers and Items in your chart of accounts. Select the **"Validate File Data"** button. Then select **"Yes"** in the Validation Confirmation popup.

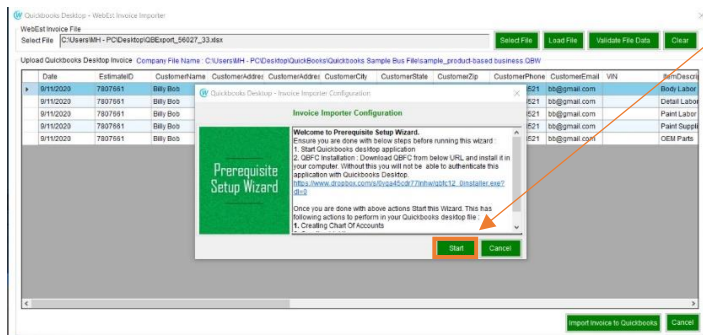

You will then see that **"File Validation"** is in process. Wait for this process to complete.

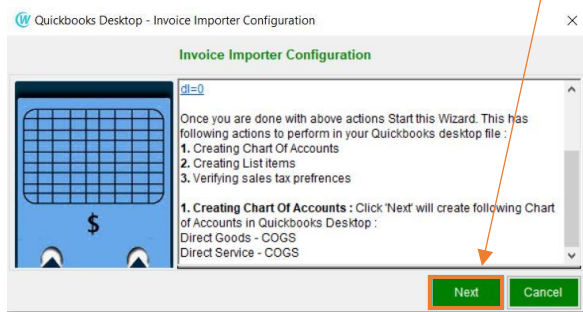

After File Validation has completed, you may see a popup advising that some QB's Chargeable Items do not exist in your QuickBooks account. Select the **"Yes"** button on this popup to begin the process of auto-creating them in QB's.

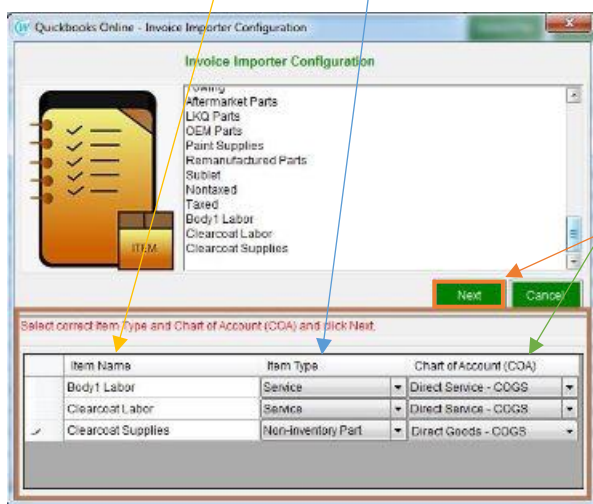

You will then get a popup that will allow you to correctly configure the Chart of Accounts & Items in QB's. This will only happen if they do not exist in QB's. Select the **“Start”** button and wait for the popup message to change.

The message will change. If QB's recognizes the imported Item Description, it will automatically create the Chart of Accounts & Items. Select the **“Next”** button.

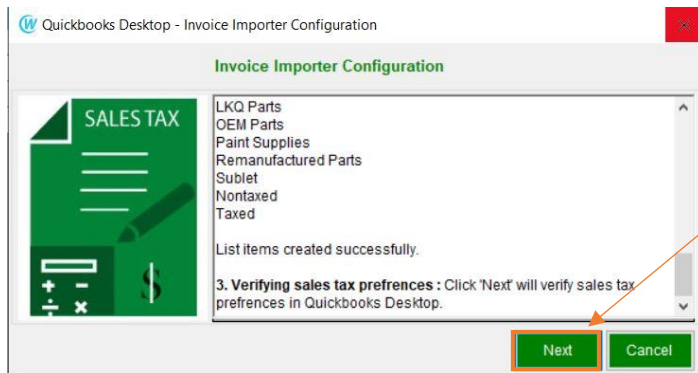

If QB's needs additional input from the user, you will see an additional area below the Configuration popup. The **“Item Name”** will be displayed for each entry needing clarification and the user will use a **dropdowns** to select the **“Item Type”** along with the **“Chart of Accounts”** entry. Then select **“Next”**.

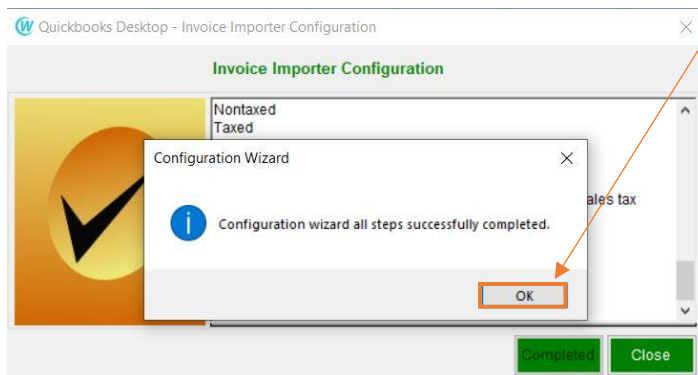

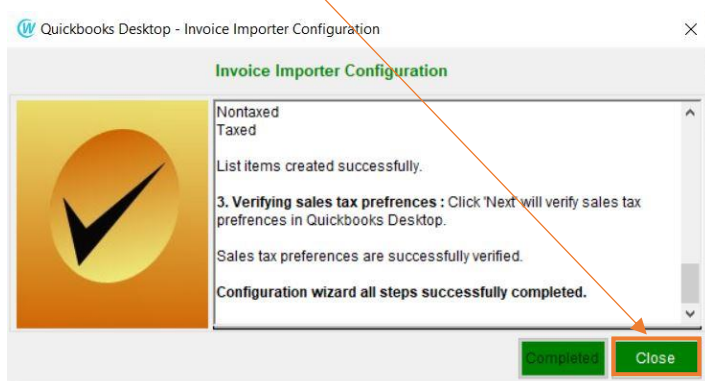

Screen 3 of the configuration wizard will verify sales tax preferences. Select the “Next” button.

You will then get a configuration completed popup. Select “OK”.

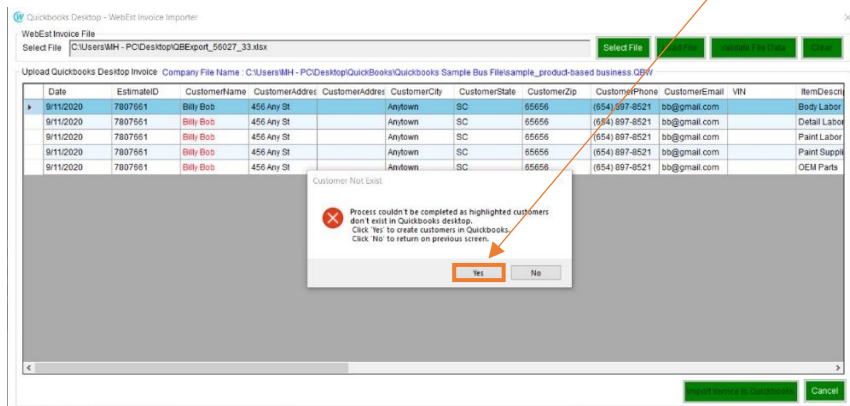

Then select the “Close” button to complete this process. \*\*\*This process will only happen until all charge types imported from Pro-Estimator have been recognized and created inside of QB’s. After the initial import of the individual charges, QB’s will automatically accept them without input from the user.

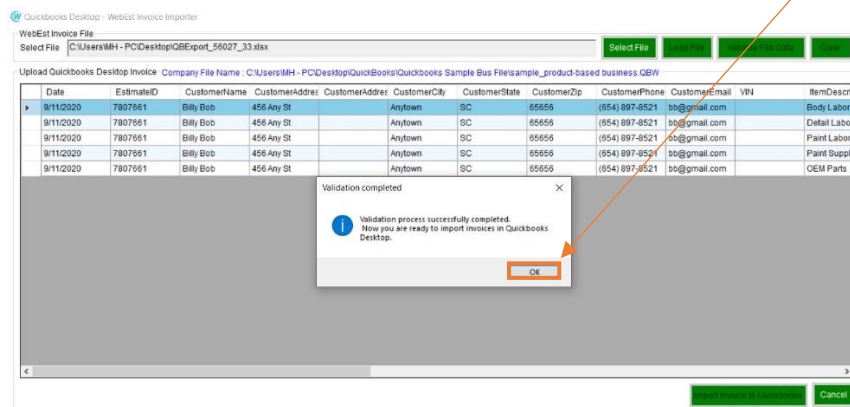

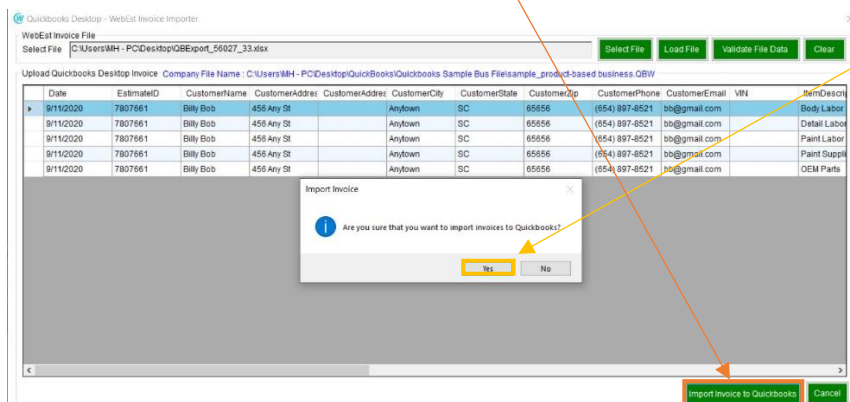

Next you will create the Customer in QuickBooks. Select **“Yes”** on the **“Customer Does Not Exist”** popup.

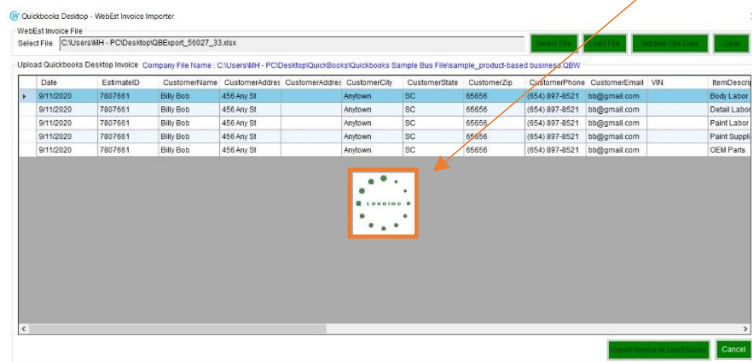

You will then see a File Validations Successful popup. Select the **“OK”** button to proceed.

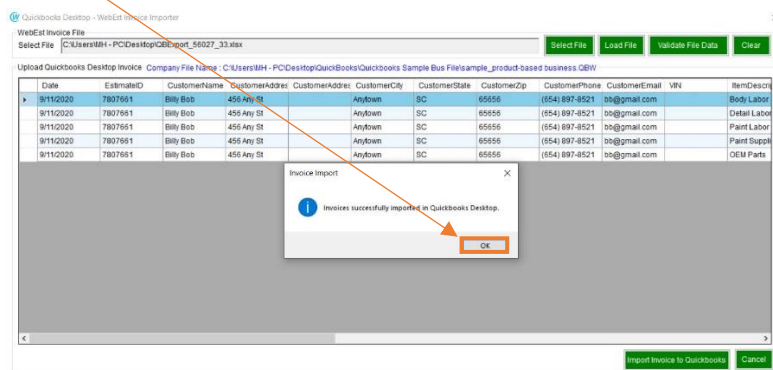

Then will see a final popup to confirm you want to import the file into QB's. Select the **“YES”** button, then select the **“Import Invoice to QuickBooks”** button.

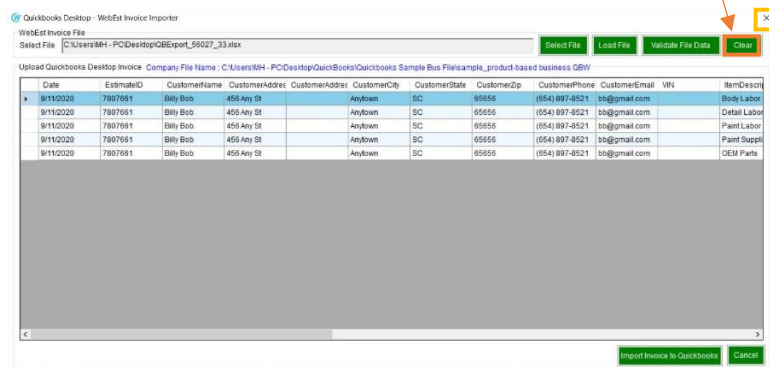

While the invoice is being imported you will see a “Loading” popup.

Once the invoice is successfully imported into QuickBooks, you will receive a confirmation popup. Select the “OK” button to dismiss the popup.

Next, you can clear the importer and close it. Select the “Clear” button and the “X” in the top right corner to close the importer, if you are finished importing invoices.

Your Invoice(s) is now imported into QuickBooks. \*\*\*Remember, if you do not have your \$0.00 Tax Item in QB's selected as "Your most common tax item", you will need to manually select that on each imported invoice. The Pro-Estimator QB's importer places the taxes as a "Line Entry" on the QB's invoice and is also added to the Tax Liability Item in QB's. This allows for the accurate importation of invoices with variations of normally taxable entries, to account for Tax-Exempt repairs. Select the \$0.00 tax item in the "Tax Dropdown" in the lower portion of the QuickBooks Invoice to avoid double taxation.
